PTS-Prüftechnik for the first time at InnoTrans 2026

Engineering, simulation and testing all the way to series production readiness

Waldstetten, September 2026. PTS-Prüftechnik, an experienced partner for manufacturers and suppliers in the railway, e-mobility and automotive sectors, will present itself for the first time at the international trade fair InnoTrans in Berlin from September 22–25, 2026. At CityCube, Hall A, Stand 150, visitors can see for themselves how the company supports its customers in developing technical systems and components through to series production readiness.

Particularly in the transport sector, and especially in passenger transport, the reliability, performance and safety of vehicles are central requirements. Added to this are new drive technologies and factors such as resource and consumption efficiency as well as the lowest possible emissions. Developing new products is therefore becoming increasingly demanding for manufacturers. This is exactly where PTS-Prüftechnik comes in: the company is an experienced development partner in railway and automotive, combining years of engineering expertise with detailed simulations and physical tests under realistic conditions. Close collaboration with customers results in practical solutions that help bring innovative technologies to market readiness faster and ensure reliable system performance.

Practice-oriented combination of engineering, simulation and testing

PTS-Prüftechnik's services include development, design and prototype construction, simulations and laboratory testing, tests for batteries, powertrains, thermal management and EMC (electromagnetic compatibility), as well as complete vehicle testing. The development and operation of customer-specific test benches round out the extensive portfolio.

This year's InnoTrans motto, "The future of mobility," is a perfect match for the trade fair debut, as PTS-Prüftechnik works continuously with manufacturers and suppliers on innovative mobility solutions: the specialized team supports well-known industry players in bringing their components, systems and vehicles from concept to validation quickly, safely and cost-effectively.

About PTS-Prüftechnik
PTS-Prüftechnik is an owner-managed development and testing service provider with seven locations. The company supports manufacturers and suppliers from the automotive, e-mobility, railway, industrial and energy sectors in the development, testing and validation of technical components and complex systems. The service portfolio combines engineering, simulation and testing and ranges from the concept and development phase through design, prototype construction and simulation to physical testing and validation. A key part of this is the development and operation of customer-specific test benches. PTS sees itself as a development partner that works together with its customers to turn technical challenges into practical solutions — with the goal of bringing innovative technologies to market readiness reliably, efficiently and sustainably.
